```
Object subclass: #RAAbstractBindingWrapper
        instanceVariableNames: ''
        classVariableNames: ''
        poolDictionaries: ''
        category: 'RestAPI'
```

I am an abstract class for all the bindgins between the REST api and a way to manage files.

My purpose is to provide a way to easily extent the REST api backend (FTP, FS, ...)
